# Donation FAQs

## 01 WHAT ARE THE CRITERIA FOR MY DOG/CAT TO BE A DONOR?

-  Friendly temperament
-  Healthy
-  Aged 1–8 years
-  Over 4.5 kg (cats)
-  Over 25 kg (dogs)
-  No previous transfusion

## 02 CAN PREGNANT OR NURSING ANIMALS DONATE BLOOD?

It is not advisable. Lactating females may only donate at least two months after giving birth.

## 03 HOW LONG DOES BLOOD DONATION TAKE?

The procedure itself is not lengthy and takes around 2–5 minutes.

## 04 DOES MY PET NEED TO FAST BEFORE DONATION?

A light meal is advised up to two hours beforehand to prevent travelling or donating with a full stomach. High-fat meals and treats should be avoided in the 24 hours prior to donation (this is for blood product quality). Water intake should not be restricted and can be available at all times.

## 05 IS MY PET SEDATED?

No, blood donors are not sedated.

## 06 MY PET TAKES CHRONIC MEDICATION. CAN IT DONATE?

It depends on the clinical situation. We recommend notifying the team at the time of registration and we can advise you. Donor welfare and safety is always the priority.

## 07 WHERE DO DONATIONS TAKE PLACE?

At our “Donation Points” or within our specifically adapted donation vehicle. Our donation locations are chosen to allow the procedure to be carried out in a calm, safe and “fear-free” way.
